- I know you said the bar was not clickable, but I have noticed that I able to click ahead in the top bar when it is not filled. After it is filled I cannot click back, but you might want to look into that because I would very much appreciate it if the scroll bar is navigatable. If it is not clickable, then we can probably stand to removed the top bar and just use links + horizontal scrolling.
- This pdf will be updated when Mike puts the content on the website.
